this book provides a game theoretic model of interaction among voip telecommunications providers regarding their willingness to enter peering agreements with one another the author shows that the incentive to peer is generally based on savings from otherwise payable long distance fees at the same time termination fees can have a countering and dominant effect resulting in an environment in which voip firms decide against peering various scenarios of peering and rules for allocation of the savings are considered the first part covers the relevant aspects of game theory and network theory trying to give an overview of the concepts required in the subsequent application the second part of the book introduces first a model of how the savings from peering can be calculated and then turns to the actual formation of peering relationships between voip firms the conditions under which firms are willing to peer are then described considering the possible influence of a regulatory body

this comprehensive text presents a rigorous framework from within which regulators can respond strategically to the claim by the pharmaceutical industry that lower drug prices today lead to a loss for the population s future health due to less innovation it starts with a critical review of the empirical evidence of the return to consumers on their ongoing investment into high drug prices in order to increase future innovation the implicit critical and unrealistic assumption inherent in these studies is identified namely that the health budget can be expanded to purchase drugs at higher prices without an opportunity cost for example the foregone benefits of alternative investments in health care infrastructure price effectiveness analysis pea is introduced pea informs the question of how the innovative surplus from the new drug should be allocated between the manufacturer and the consumer so as to optimise society s welfare the method allows the decisions by the regulator and the firm to be analysed jointly by specifying the firm s production and revenue functions in terms of the clinical innovation of a new drug the incremental effect used in the summary metric of cost effectiveness analysis an economic value of innovation that takes into account opportunity cost under conditions of economic efficiency in the health system is proposed the health shadow price the limitations of the non strategic methods that currently inform the highly contested new drug subsidy game are presented and the relative strengths of pea are demonstrated health technology assessment quantifies both the clinical innovation of a new drug and its financial impact on the health system cost effectiveness analysis tests the relationship between the incremental cost and incremental effect of a new drug for target patients at a given price pea tests the relationship between the price of a new drug and the health of the whole population now and into the future it achieves this by taking into account current inefficiency in both resource allocation and the displacement process and the relationship between price and future innovation
